## THE WORLD LIFE SCIENCES FORUM GOES ONLINE: THE QUEST FOR SOLUTIONS CONTINUES

Everyone interested in Life Sciences, worldwide, can now find and post Life Sciences solutions on [BioVisionSolutions.org](http://BioVisionSolutions.org), a unique collaborative website launched today by the World Life Sciences Forum.

The role of the online platform is to emphasize the importance of solutions to today's growing crises. Top level scientists, renowned policymakers and decisionmakers, media, civil society representatives and interested citizens will find and post solutions on the website, and engage in a discussion of these solutions.

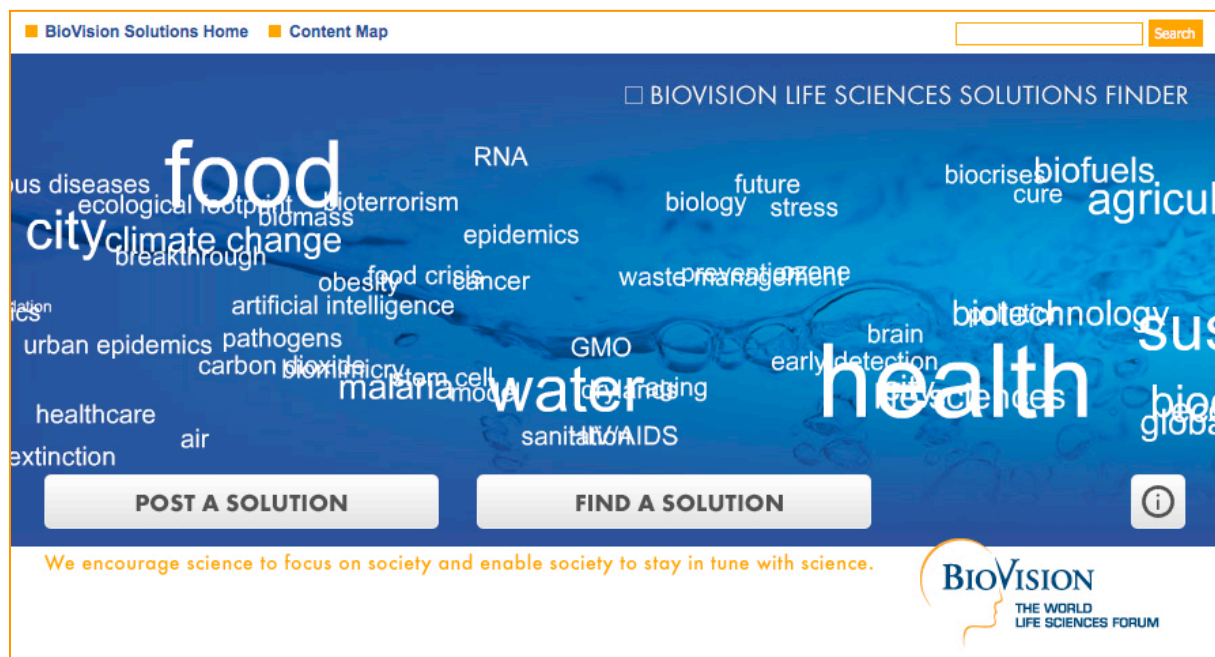

Using a dynamic animated tag cloud-based navigation header, visitors are invited to discover the different issues and to debate Life Sciences. Pollution, climate change, biodiversity, GMOs, water supply and sanitation, biofuels production, waste management, brain imaging, urban epidemics, biorobotics... are some of the life critical issues addressed.

Humanity's formidable challenges need real world solutions. With the launch of its online Life Sciences Solutions Finder, the [World Life Sciences Forum](http://World Life Sciences Forum) reinforces its commitment to encourage science to focus on society and to enable society to stay in tune with science.

BioVision invites all those interested in Life Sciences to make a difference by posting their solutions.

Find and post innovative Life Sciences solutions on [www.BioVisionSolutions.org](http://www.BioVisionSolutions.org)

Note to journalists: We invite journalists to also post solutions and content in the article section.

For further information on the portal and on the 2009 World Life Sciences Forum to be held in Lyon, France, March 8-11, please contact: Gilles Cnockaert - [gilles.cnockaert@mondofragilis.net](mailto:gilles.cnockaert@mondofragilis.net) - + 33 6 03 52 42 90
